# REDACTION

## What is it?

Redaction is the process of removing sensitive or classified information from a document prior to its publication.

## Why is it important?

Improperly redacted documents can risk exposure to potential litigation and fines. Placing black bars over text may hide sensitive data from viewers, but it does not sanitize the underlying data - which remains searchable.

---

# EXTRACTION

## What is it?

PDFs are designed to be viewed consistently across different devices and platforms. The downside of this is that information within PDFs are not easily accessible. Extraction allows you to access and transform data within PDFs into XML and HTML formats.

## Why is it important?

Inferior tools often lack the ability to accurately and fully process table data. This can affect workflows that heavily rely on purchase orders, financial documents, and statistical information. Scanned PDF documents are a challenge that OCR extraction capabilities can easily overcome.

---

# OPTIMIZATION

## What is it?

Ensuring that PDFs are optimized is important if you expect users to consume your content. If a PDF takes longer than 4 seconds to load, a user is more likely to ignore it. It's important to keep your documents lean and clean.

## Why is it important?

There's a lot of optimization tools out there, but that doesn't mean they're all created equal. Inferior tools can cause document corruption, mishandled color, inaccurate outputs, and more. Unoptimized PDFs result in slow processing speeds with viewers and negatively impacts workflow.
